

These are plans of two experimental bukas that Rob DiStefano designed; SUPA BUKA 3 & 4. He reports the first kites he made from these plans did not perform as well as he'd like....however, when someone else makes the kites, they may perform better than Rob thought....we each have different perspectives about what is a good flying kite.

And as we all know, if they need a slight modification that you may recognize, that alone could make them top performing kites. The plans are here so you can make the kites and as idea stimulators. This is the great part of sharing.....seeing new ideas from other fighter fans!

Have buka fun!!

Biggrins, bruce
