

# Saucy Owl

by Gerhard Zitzmann of Vienna, Austria

September 2003

The saucy owl is a big and precise flyer for experts or also for beginner. The plan is special for low wind conditions. For very low wind i build it with 0.05 inch Carbon bow, then the kite fly slow and so it is also good for learning to fly with fighterkites. When you build it with 0.06 inch Carbonbow the kite shows his true self.... The spine i made from bamboo and the battens are 0.03 inch carbon. For the sail i use Orcon or Polypropylene Film.

When you build this kite i will be very happy when you send a foto to me, i can presented it on our homepage.

I hope you like building and flying the S.O.
